Investing in a breastfeeding employee support program has proven to produce a 3-to-1 return on investment through greater employee retention, increased productivity, lower health care costs and decreased sick days.

The fastest growing segment of today’s labor force is women with infants and children. 58% of women employed when they become pregnant return to the labor force by the time their child is 3 months old.

Breastfeeding employees miss work less often

Employers that support breastfeeding through their policies enjoy reduced employee absenteeism.

Human milk boosts an infant’s immune system and helps protect against common childhood illnesses, infections and dermatitis.

Because breastfed babies are generally healthier, mothers and fathers are able to spend more time at work rather than taking leave to care for sick children.

Retention Rate for Employees of Companies with Lactation Support Programs

- Companies with lactation support programs: 92%
- National Average: 59%

Lower turnover rates

Employees are more likely to return to work after childbirth when their workplace provides a supportive environment for continued breastfeeding.

Being able to keep experienced employees after childbirth means lowering/eliminating the costs associated with hiring temporary staff or to recruit, hire, and train replacement staff.

More employer benefits...

- Improves employee job satisfaction and productivity
- Increases loyalty and morale among all employees
- Enhances family-friendly image of company in the community
